

Deck Details

When (in 1987) we were building the deck as detailed in the **Addition plans to the Solar Saltbox**, we came up with a better way of doing the railings. The spacing of the 2x2 pickets is subject to building codes. When we built ours we had them 6" o/c, but now they would be required to be spaced closer so there was no more than a 4" opening between pickets. Thus I have called out a 5 1/2" spacing.

Local deck requirements can vary. Here is an on-line document that was done for a Georgia County building department: http://www.gwinnettcountry.com/departments/planning/pdf/decking_details.pdf The details and measurements shown there are likely to be similar in most parts of the country.
